

Automating your EOB processing with PROSAR-AIDA from *Paradatec*

PROSAR-AIDA from *Paradatec* can produce measurable benefits at every level of the organization by improving the speed and efficiency at which a company captures and processes patient Explanation Of Benefits information. The benefits resulting from PROSAR-AIDA encompass additional revenues as well as savings from reduced costs.

Hard Dollar Savings

Labor savings

- Reduced need for data entry operators; document prep workers, sorters, etc.
- Increased accuracy of data extracted from EOB's reduces the time spent on error correction

Improved cash management

- Faster payment postings and access to more accurate payment data, means increased control over billing and accounting processes, which leads to better overall cash flow management
- Faster, more accurate generation of critical payment data, expedites the process of Secondary Claim submissions

Rapid return on investment

- In mid to high volume organizations, the payback on PROSAR-AIDA is usually less than a year

Soft Dollar Benefits

Increased worker productivity

- More EOB's are processed in a shorter time
- Other healthcare management processes dependent on content extracted from EOB documents, are shortened. Resulting in truncated business cycles from increased throughput

Improved customer service

- Faster and more accurate EOB processing means that more customers get served more rapidly, with fewer payment errors

Fewer Employee physical health hazards

- Reduced data entry labor requirements mean fewer incidents of carpal tunnel syndrome, repetitive stress syndrome and reduced Workers Compensation Claim

The Challenges of Processing EOB's

- **No fixed form layout**
- **Not possible to pre-define "reading zones" to perform Doc ID & Data Extraction**
- **Multiple patients per page**
- **Data positions for: Patient name; Claim number; Allowed; Billed; Procedure code, will vary by provider**
- **Labor intensive data entry**

Why PROSAR-AIDA ?

- PROSAR-AIDA does not use templates or make assumptions about the layout of potential documents or forms.
- It always performs a full-page OCR.
- It analyzes the OCR output based on rules that define the general properties of the various types of documents.
- It then determines the document type such as an EOB.
- Rules also indicate the general properties of data fields to be extracted (without needing to know locations of data fields).
- Rules are provided without programming via a simple user interface.
- Despite a full-page OCR for each page, PROSAR-AIDA typically processes a page per second or roughly 3,000 images per hour on a single PC.
- A unique feature of PROSAR-AIDA is the ability to extract large volumes of tabulated data, such as line items on an EOB form to a mature degree of accuracy and with a minimum amount of effort by the end-user.

Automating the process

PROSAR-AIDA will:

- Classify by payer
- Detect table data
- Validate key data
- Exports key values
- Eliminate data entry

Paradatec founded in 1988, focuses its engineering skills to delivering the most powerful and flexible Unstructured and Freeform data capture solution in the ECM market.

Our flagship product, PROSAR-AIDA, seamlessly integrates with industry leading document capture platforms such as **InputAccel™** from Captiva, and **Ascent Capture™** from Kofax, to deliver a Best-In-Class document and data capture solution. Through a select group of systems integrators and OEM partners, PROSAR-AIDA has been deployed in a variety of applications across all major industry verticals including: Healthcare, Insurance, Banking, Automotive and Retail. With nearly a decade of production use, PROSAR-AIDA has been proven to be a mature robust solution that can scale from thousands to hundreds of thousands of images per day, and deliver a substantial ROI.

PROSAR-AIDA, reduces the need to manually sort any mix of Freeform documents, and classify them without the use of templates or Zone OCR. Through sophisticated business rules it will extract and export key data fields, and with our uniquely powerful table/line item reading functionality, we can interpret complicated layouts of tabulated data.
