

**V**iew documents from anywhere – in seconds! Let Fortis Portal open the door to a more efficient and effective way to manage documents.

The business world of today is constantly on the move, and to be effective you need the latest information at your fingertips to make the right decisions. With Fortis Portal, organizations with locations down the street or around the globe now have the ability to view documents from anywhere – in seconds.

Access to this information not only fuels decision making, but is the driver in many organizations that need to achieve ultra-high standards in customer service. Customer service technicians, labor departments, department of motor vehicles, service bureaus, utility companies, and others require customer access to documents without the requirement of downloading specialized viewers.

Fortis Portal provides documents in the format you want on demand. In addition, it is designed to work around the most common obstacles preventing instant document access Fortis Portal provides:

- Read-only access to Fortis documents
- Access to Fortis documents outside a firewall – through port 80
- Standard rendering to PDF documents
- Secure Fortis environment using existing Fortis security credentials
- Zero “foot print” on the client
- No ActiveX controls
- Load balancing on multiple web servers
- Access to Fortis documents from Mac computing environments

# Fortis<sup>™</sup> portal

Fortis Portal is a rendering engine with a simplistic, thin-client interface designed for those customer facing businesses or geographically distributed environments. Fortis Portal includes a host of Fortis web-services that can be called separately or through the provided web-based interface. The interface includes advanced toolkit options from Infragistics and can be customized using standard Microsoft ASP.Net code to resemble your Internet/Intranet site.

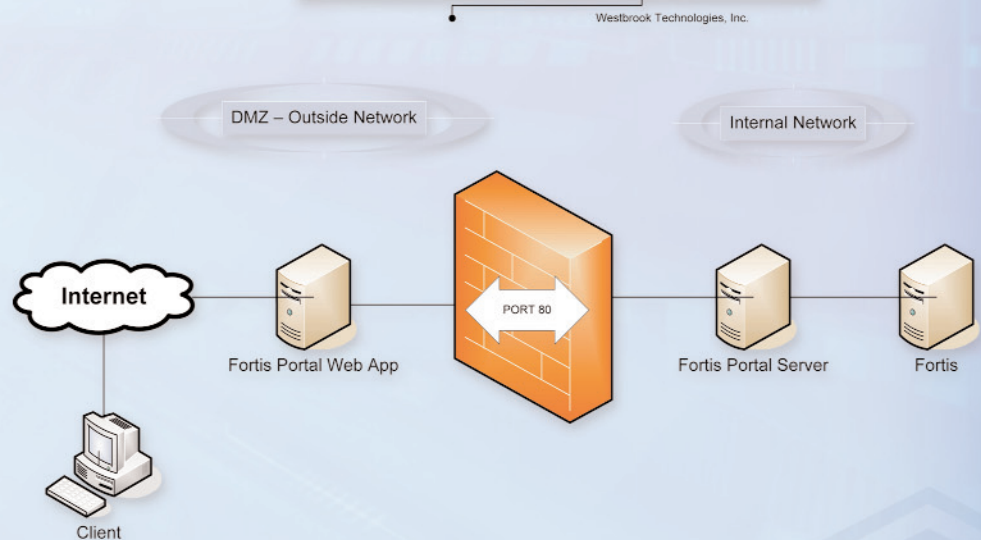

The Fortis Portal interface allows for two query methods. Browse Folder allows a user to search the contents within a specified Fortis folder. Users will be presented with all document types found in the folder via a tabbed dialog. The second search option is by query sets or pre-defined queries. In this case users can run either static or variable queries. The results set in both instances can be sorted, rearranged and copied to Excel.

Fortis Portal under-the-hood uses the unique Fortis document identifier to retrieve the MAG file, renders it to PDF on-the-fly and automatically starts Adobe Acrobat with the rendered PDF on the client. The entire process occurs only through port 80 via byte array, so performance is optimized and network security is not an issue. Fortis Portal uses an edit or scan license upon rendering or when navigating thru either a folder or query set and then immediately releases the license.

## Fortis Portal Prerequisites

- Fortis 2.3 SP6
- Microsoft IIS 5.0 or higher on Fortis application server
- Fortis web services must be installed on the Fortis application server
- Given the workload – the Fortis application server should be high-end
- Adobe Reader version 5 or above must be installed on the client
