

## Add control with User Manager for Fortis PowerWeb

User Manager will serve as a portal for your Web Access client workstations. Any client entering Fortis PowerWeb through the portal will be subject to the policies defined by your administrator. User Manager allows end user control of passwords over the intranet or internet, a function previously only available to Fortis LAN Client users.

User Manager provides administrator defined settings including:

- Minimum Length Enforcement – Passwords must be 8 characters in length
- Password Age Enforcement – Passwords must be changed every 30 days
- Password History Enforcement – A users last 10 passwords are kept and can not be reused
- Password Complexity Enforcement – Require numbers and special characters

## User Manager Process Flow
